To Whom It May Concern:

We recently had the experience of pre-selecting Dawson Construction, Inc. to construct a new 55,000 S.F. edition for the Wood Stone Expansion Project. The site has difficult soils issues and the project required a piling system to support floor and columns loads.

Our client was very interested in exploring different options for the steel structure and the concrete supporting slab due to some precise calibrations that they required for their manufacturing process.

Dawson's construction team was very helpful in examining and providing cost data for numerous steel structure scenarios and concrete slab reinforcement. We were able to examine several options with provided the Design team and the Owner with real time data to make educated decisions.

The pre-construction budgeting process proved to be accurate with the final actual construction costs coming in below the GMP.

I would highly recommend their pre-construction services to anyone.

Sincerely,

Peter J. Carletti
